diverse community

diverse mix

diverse culture

# THE CLIMATE IS CHANGING AND SO SHOULD WE!

## WHAT IS CLIMATE CHANGE?

Climate change is simply, long-term shifts in temperatures and weather patterns. We are all responsible for climate change because of the things we do so often, like burning fossil fuels and not being wary of the foods we eat.

## WHAT ARE THE IMPACTS OF CLIMATE CHANGE?

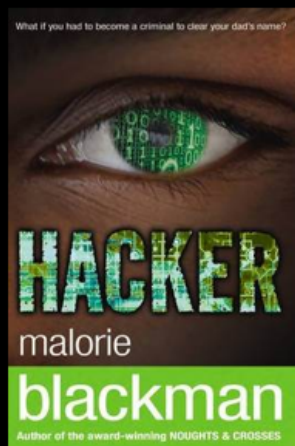

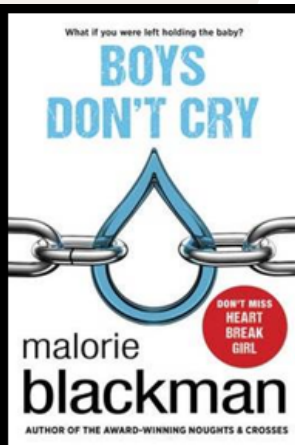

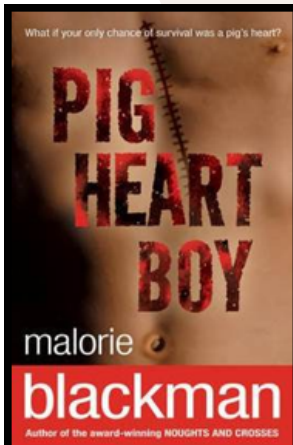

Climate change can cause many disruptions such as; hotter temperatures, severe storms, food shortages and loss of species. Climate change can even cause poverty and displacement because, due to weather-related disasters, 23 million people a year are displaced from their jobs.

**WHAT CAN WE DO?** We can all give our help by changing some insignificant things in our lifestyles. For example, we can walk to places that are a short distance, take public transport for longer distances and stop wasting food!
